

KW Hab – Meeting Notes

Project Overview

- Goal: Break down silos between development organizations.
 - Create a centralized landing page or hub for events and services.
 - Make information easy to access and understand for the people being supported.
 - Allow users to see events and services from multiple agencies in one place.
 - Improve collaboration between organizations and build stronger relationships between frontline staff.
- Increase the ability for community members to discover and attend programs.

Current Solution

Participating Organizations

- 12 agencies currently involved in KW Habitat collaborations.
- All organizations are ministry-funded organizations.
- Currently 7 contributors add events:
- KW Habitat + 6 partner organizations.

Current Tools

- Currently, they have a shared community calendar that has been used to display events.
 - Allows users to view events by day or by month.
 - The calendar is intended to show all agency events in one place.
- When a user clicks on an event they can see:
 - Image
 - Description
 - PDF attachments
 - Link to register
 - Registration occurs through the KW HAB Marketplace.
 - Differs based on NPO (out of our scope)
- Events can be color-coded by nonprofit organizations (NPO).
- Categories can include:
 - NPO
 - Free events
 - Paid events
 - Youth events.

Current Challenges

- Navigation and Usability Issues
 - The calendar is not easy to navigate.
 - Information is not easy to access from the calendar hub.

- The design is not visually appealing.
- The calendar can feel overwhelming due to too much information.
- It was not designed with accessibility in mind.
- Accessibility Considerations
 - Accessibility is an important focus for this project.
 - Some users may struggle due to:
 - Low literacy skills
 - Visual impairments
 - Intellectual disabilities
 - Other types of disabilities

User Needs

- Needs of NPO Staff
 - Staff from participating organizations need tools that are easy to use.
 - Requirements include:
 - Ability to create events easily
 - Ability to add detailed event information
 - A system that supports multiple contributors from different agencies
- Needs of End Users
 - Easy way to learn about different events from NPOs
 - Information should be accessible and follow AODA
 - Easy way to lead to registration (NPOs already have their own registration methods)
 - Able to see events based on interest (events close by, events with specific activities, free/youth)
